DETAILED ACTION

1. Claims 1-2 and 4-17 are presented for examination. This office action is in response to the Amendment After Final Action filed on May 02, 2005. Claim 3 was "objected to" in depending from a rejected base claim, but containing patentable subject matter on final action. Applicant amended independent claim 1 to include the limitations of objected to claim 3. Claim 3 is canceled.

Allowable Subject Matter

2. Claims 1-2 and 4-17 are allowed.

Reason For Indicating Allowable Subject Matter

3. The following is a statement of reasons for the indication of allowable subject matter: Claim 1 identifies distinct feature, the computer method for searching a query servers organized as a forest having a plurality of entries. The closest prior arts, Chandra et al (U.S. Patent No. 6,457,047) and/or Cooper et al (U.S. Patent No. 5,948,063) disclose, generating a topology cache of the distributed directory servers, the topology describing the forest-structured, distributed topology of the directory servers, storing the generated topology cache at each server, upon receiving, at one server, a request from a directory client associated with that server, sending a copy of

Art Unit: 2162

the topology cache to the client to determine the identity of each directory server capable of returning answers to the query. The prior arts do not address computer method for forming, at the client, a distributed-query evaluation plan P for a given query Q , based on the topology cache T sent to the client,

where $P = Q_{S_1} @ S_1 \cup \dots \cup Q_{S_k} @ S_k$,

where S_1, \dots, S_k are defined as relevant directory servers for query Q extracted from the topology cache T and Q_{S_i} is the particular query for user with-server S_i .

Chandra et al (U.S. Patent No. 6,457,047) and/or Cooper et al (U.S. Patent No. 5,948,063) fail to suggest the claimed limitation as mentioned above in combination with other limitations of the dependent and independent claims. The claims 2 and 4-17 are hereby allowed.
